***schemaless***

**(like DocDBs)**

# quite simple...

```
City: Venice          <-- thing  
  major: Orsoni      <-- thingie  
  population: 270k   <-- thingie
```

**Three components:**

# **1) TastyDB**

**with his very own  
query language (tnx ply)**

**ticket/\_/**

**ticket/\_/project/TastyDB**

**len(ticket/\_/project/TastyDB/  
status/closed)**

```
int(  
    len(ticket/_/project/  
        TastyDB/status/closed) * 100. //  
    len(ticket/_/project/TastyDB)  
)
```

## 2) TastyEngine

Used to render *thingz* lol

**3) TastyAdmin**

**aka teh backoffice**

demo

**will be released under a  
OSI approved license**
